

ARTIFICIAL INTELLIGENCE · EXECUTIVE

Forward Deployed AI Leadership

Lead AI adoption with clarity and evidence.

Turn AI ambition into governed, measurable enterprise outcomes.

1-2 day executive program
+ workshop

4 modules

Professional learning

Explore the learning experience →

Practical learning. Clear progression. Work you can explain.

YOUR NEXT CAPABILITY

What will you be able to do?

An executive program for prioritizing AI investments, challenging delivery proposals, governing risk and leaving with a practical 90-day execution blueprint.

Prioritize AI investments

Challenge architecture and vendor proposals

Define governance and human accountability

Create a 90-day execution blueprint

Who this is for

- CXOs
- CIOs and CTOs
- VPs and directors
- Transformation leaders

Your starting point

- No coding required

Your progression at a glance

FROM CONCEPT TO EVIDENCE

Learn it. Apply it. Explain it.

Move from guided concepts to practical exercises and a coherent piece of work. Use the course resources to revisit difficult ideas and make your reasoning visible.

THE CURRICULUM

A clear route through the subject.

Every module builds towards practical work. The course outline below is aligned with the academy's current program catalog.

1 AI Reality for Leaders

Capabilities, limits and production readiness.

- LLM capability and limitations
- RAG, fine-tuning and SLMs
- Agents and autonomous workflows
- Voice, vision and multimodal opportunities

2 Prioritize and Fund

Value, feasibility and economics.

- Opportunity discovery
- Data and permission readiness
- Build vs buy vs partner
- AI economics and ROI

3 Govern and Operate

Accountability, security and adoption.

- Risk and human control
- Security and auditability
- Operating model
- Adoption and change

4 90-Day Execution Blueprint

Turn decisions into an executable portfolio.

- Select priority use cases
- Define pilot and metrics
- Set governance checkpoints
- Present the 90-day plan

FROM CONCEPT TO EVIDENCE

Practice with purpose

Turn a business opportunity into a prioritized use-case portfolio, pilot proposal and responsible operating model.

BUILD SOMETHING THAT DEMONSTRATES YOUR LEARNING

AI adoption decision portfolio

Turn a business opportunity into a prioritized use-case portfolio, pilot proposal and responsible operating model.

**Use-case prioritization****Governance and ownership map****Pilot measurement plan**

Tools and working methods

Opportunity portfolio

Architecture decision matrix

ROI model

Governance checkpoints

90-day blueprint

Tools are part of the learning workflow, not partner endorsements. Examples may evolve while preserving the learning outcomes.

Delivery

Hybrid learning · 1-2 day executive program + workshop

Confirm the current schedule, delivery arrangements and any prerequisites before enrolling.

Completion

A completion certificate is available after the required course work.

Course completion is not a job, placement or funding guarantee.

Your next steps

- 1 Review the curriculum and your starting point.
- 2 Review current enrollment options and delivery details.
- 3 Start learning, keep your evidence and track your progress.

INSIDE THE LEARNING EXPERIENCE

Choose a pilot with a measurable decision gate

A leadership team is comparing an internal knowledge assistant, automated sales outreach and invoice triage. It can fund one small pilot before making a larger commitment.

Understand the concept

Start with a workflow baseline and a named accountable owner. Compare value, feasibility, data readiness and consequence of error. A high-volume task is not automatically the best first pilot if permissions are unclear or errors are costly. Define the decision to be made at the end of the pilot before buying tools or expanding access.

Worked example

Pilot: invoice triage, with human approval

Baseline: record current handling time and correction rate

Scope: one document type and one operational team

Controls: approved data, access limits, escalation owner

Decision gate: compare measured results with agreed thresholds

Outcomes: stop, revise scope, or approve controlled expansion

Interpret the result

The pilot charter turns an AI idea into a governed experiment. Its success thresholds are agreed by the business and risk owners rather than invented in the course material. A 90-day plan includes discovery, a bounded pilot and an evidence-based scale decision.

Knowledge check

What should happen when a pilot improves speed but increases consequential errors?

Explanation: Review the agreed guardrails and stop or revise the pilot if they are breached; speed alone does not justify expansion.

YOUR PRACTICAL ASSIGNMENT

Build evidence, not just familiarity.

Choose a pilot with a measurable decision gate

Your task

- Prepare a one-page use-case scorecard for three candidate workflows.
- Write a pilot charter with owner, baseline, risks and decision gate.
- Present a 90-day adoption plan including training and rollback responsibilities.

Submission review criteria

- Explicit business problem and evidence-based baseline
- Named control owners and human-review boundaries
- A scale/stop decision tied to measured outcomes, not vendor claims

Submit

A working artifact or analysis, a short explanation of your decisions, and evidence that addresses each review criterion.

Reflect

Describe one failed approach, how you diagnosed it, and what you would test next. Identify limitations instead of hiding them.

Your project connection

Turn a business opportunity into a prioritized use-case portfolio, pilot proposal and responsible operating model.

Use the sample assignment as a stepping stone toward the course project, not as a substitute for the full curriculum.
