

Cybersecurity · Foundation

Build security judgment. Secure what matters.

Develop security judgment through threat modeling, IAM, network and application security, cloud concepts, monitoring and incident response exercises.

Self-paced online

8-12 weeks

THE SKILLS THE ROLE NEEDS

Cybersecurity Foundations - learned by building, not memorising.

Practical security foundations across identity, networks, applications and incident response. Every capability is connected to deliberate practice, evidence and review.

01

Understand common attack surfaces

Understand common attack surfaces

02

Apply secure development practices

Apply secure development practices

03

Identify identity and network risks

Identify identity and network risks

04

Practice incident response thinking

06

Threat modeling

Threat modeling

The learning journey

Move from understanding to demonstrable capability.

1

Understand

2

Practice

3

Build

4

Review

5

Demonstrate

CORE PROGRAM

From foundation to applied delivery.

8-12 weeks · 4 current BRD-aligned modules · practice and evidence in every stage.

01

Security Foundations

Risk, threats and defensive thinking.

Security principles · Threat actors and attack surfaces · Threat modeling · Security controls

02

Identity and Networks

Secure access and communication.

Authentication and authorization · IAM and least privilege · Network security · Cloud security basics

03

Application Security

Build and test safer software.

OWASP risks · Web and API security · Secrets and data protection · Secure development lifecycle

04

Monitoring and Response

Detect, investigate and learn.

Security logging · Detection concepts · Incident response · Security review capstone

TOOLS & PRACTICE

Build with the current working set.

◇ OWASP

◇ Threat modeling

◇ IAM

◇ Security logging

CAPSTONE DIRECTION

Frame a realistic problem, build the role-appropriate artifact, explain the trade-offs, respond to review and complete the published criteria.

OUTCOMES & BEYOND

Build skill. Build confidence. Build evidence.

No inflated promises - a clear route from learning to reviewable work and verified completion.

Understand common attack surfaces

Understand common attack surfaces

Apply secure development practices

Apply secure development practices

Identify identity and network risks

Identify identity and network risks

Practice incident response thinking

Practice incident response thinking

Ideal participants

- 1 Developers
- 2 QA engineers
- 3 IT professionals
- 4 Security beginners

What you will demonstrate

01 · Understand common attack surfaces

Documented, reviewable and connected to the learning record.

02 · Apply secure development practices

Documented, reviewable and connected to the learning record.

03 · Identify identity and network risks

Documented, reviewable and connected to the learning record.

04 · Practice incident response thinking

Documented, reviewable and connected to the learning record.
