

Space Tech · Multi-level

From curiosity to flight-ready systems.

A deep-tech path through orbital foundations, embedded systems, spacecraft architecture, communications, avionics, AI/autonomy and mission delivery.

Hybrid guided learning

24+ weeks

4 modules

[Explore the program →](#)

Understand spacecraft systems engineering

Understand spacecraft systems engineering

Build embedded and communication subsystems

Build embedded and communication subsystems

Use simulation and mission tools

Use simulation and mission tools

Complete a CubeSat/CanSat-style team project

Complete a CubeSat/CanSat-style team project

THE SKILLS THE ROLE NEEDS

Space Tech Program - learned by building, not memorising.

Foundation to CubeSat/CanSat-style industry project. Every capability is connected to deliberate practice, evidence and review.

01

Understand spacecraft systems engineering

Understand spacecraft systems engineering

02

Build embedded and communication subsystems

Build embedded and communication subsystems

03

Use simulation and mission tools

Use simulation and mission tools

04

Complete a CubeSat/CanSat-style team project

Complete a CubeSat/CanSat-style team project

05

Python and Linux

Python and Linux

06

Embedded C/C++

Embedded C/C++

The learning journey

Move from understanding to demonstrable capability.

1

Understand

2

Practice

3

Build

4

Review

5

Demonstrate

CORE PROGRAM

From foundation to applied delivery.

24+ weeks · 4 current BRD-aligned modules · practice and evidence in every stage.

01

Space Systems Foundations

Mission context and orbital foundations.

Space mission lifecycle · Orbital mechanics · Space environment · Systems engineering

02

Spacecraft Subsystems

Power, thermal, structures and attitude control.

Power systems · Thermal and structures · ADCS · Subsystem interfaces

03

Avionics and Communications

Embedded flight and ground communication.

Embedded systems · Sensors and telemetry · RF and ground stations · Flight software concepts

04

Autonomy and Mission Project

Integrate and demonstrate a mission.

AI and autonomy · Simulation and testing · Mission operations · CubeSat/CanSat-style capstone

TOOLS & PRACTICE

Build with the current working set.

Python and Linux

Embedded C/C++

Simulation tools

CAD, PCB and FPGA concepts

CAPSTONE DIRECTION

Frame a realistic problem, build the role-appropriate artifact, explain the trade-offs, respond to review and complete the published criteria.

OUTCOMES & BEYOND

Build skill. Build confidence. Build evidence.

No inflated promises - a clear route from learning to reviewable work and verified completion.

Understand spacecraft systems engineering

Understand spacecraft systems engineering

Build embedded and communication subsystems

Use simulation and mission tools

Use simulation and mission tools

Complete a CubeSat/CanSat-style team project

Complete a CubeSat/CanSat-style team project

Ideal participants

- 1 Engineering students
- 2 Embedded developers
- 3 Space-tech aspirants

What you will demonstrate

01 · Understand spacecraft systems engineering

Documented, reviewable and connected to the learning record.

02 · Build embedded and communication subsystems

Documented, reviewable and connected to the learning record.

03 · Use simulation and mission tools

Documented, reviewable and connected to the learning record.

04 · Complete a CubeSat/CanSat-style team project

Documented, reviewable and connected to the learning record.

START YOUR JOURNEY

Space Tech Program

Hybrid guided learning. Current schedule, fees, previews and seat availability appear before checkout.
