

ARTIFICIAL INTELLIGENCE · EXECUTIVE

Forward Deployed AI Leadership

Lead AI adoption with clarity and evidence.

Turn AI ambition into governed, measurable enterprise outcomes.

1-2 day executive program
+ workshop

4 modules

16 lessons

Explore the course →

Concepts, worked examples, assignments and a coherent course project.

WHO IT IS FOR · WHAT YOU WILL LEARN

Your next capability.

An executive program for prioritizing AI investments, challenging delivery proposals, governing risk and leaving with a practical 90-day execution blueprint.

Prioritize AI investments

Challenge architecture and vendor proposals

Define governance and human accountability

Create a 90-day execution blueprint

Audience

- CXOs
- CIOs and CTOs
- VPs and directors
- Transformation leaders

Prerequisites

- No coding required

FROM CONCEPT TO EVIDENCE

One curriculum, three connected views

This guide summarizes the same modules and lessons shown on the course overview and in the learning workspace. The next pages explain the scope and practical evidence for every module.

DETAILED MODULE CURRICULUM · 1-2

Build the foundations.

The module names, lesson sequence and evidence below match the course learning workspace.

1 AI Reality for Leaders

Evaluate AI proposals by capability, evidence and consequences of error.

1.1 LLM capability and limitations

Fluent output can conceal missing evidence.

1.2 RAG, fine-tuning and SLMs

Retrieval supplies external context; fine-tuning changes learned behavior; a smaller model may suit a bounded task.

1.3 Agents and autonomous workflows

Autonomy changes who selects the next step and therefore changes risk.

1.4 Voice, vision and multimodal opportunities

Voice, image and document workflows can expand access but also introduce recognition errors and privacy concerns.

You will produce: Capability assessment and decision-boundary map.

2 Prioritize and Fund

Choose an opportunity that the organization can responsibly validate.

2.1 Opportunity discovery

Start with an observed bottleneck and a named user group.

2.2 Data and permission readiness

Data readiness includes quality, access rights, provenance and ongoing maintenance.

2.3 Build vs buy vs partner

Compare build, buy and partner options against integration, control, skills, cost and exit needs.

2.4 AI economics and ROI

Estimate value from a measured baseline and explicit assumptions.

You will produce: Opportunity portfolio and assumption-based business case.

Practice is part of every module

Work through the example, record your reasoning, complete the module assignment and compare your work with the review criteria.

DETAILED MODULE CURRICULUM · 3-4

Apply, integrate and demonstrate.

The module names, lesson sequence and evidence below match the course learning workspace.

3 Govern and Operate

Assign responsibility for safe operation and meaningful adoption.

3.1 Risk and human control

Identify the consequences of error and place human control where it can prevent harm.

3.2 Security and auditability

Auditability requires knowing who requested, approved and executed an action.

3.3 Operating model

Assign business ownership, technical operation, incident response and change approval.

3.4 Adoption and change

Adoption requires role-specific training and feedback channels.

You will produce: Governance charter, access matrix and adoption plan.

4 90-Day Execution Blueprint

Present a 90-day plan with a decision gate rather than a guaranteed outcome.

4.1 Select priority use cases

Select a small set of use cases that share a measurable goal and a ready owner.

4.2 Define pilot and metrics

Define the pilot's audience, baseline, measures and guardrails before launch.

4.3 Set governance checkpoints

Schedule checkpoints for data access, evaluation, user readiness and incident handling.

4.4 Present the 90-day plan

Present scope, owners, cost assumptions, delivery phases and stop/scale criteria.

You will produce: 90-day execution blueprint and executive review deck.

Practice is part of every module

Work through the example, record your reasoning, complete the module assignment and compare your work with the review criteria.

PROJECTS AND WORKING METHODS

AI adoption decision portfolio

Turn a business opportunity into a prioritized use-case portfolio, pilot proposal and responsible operating model.

Use-case prioritization

Governance and ownership map

Pilot measurement plan

Tools and methods

Opportunity portfolio

Architecture decision matrix

ROI model

Governance checkpoints

90-day blueprint

Tools are learning choices, not partner endorsements.

Inside module 1: a worked example

Proposal review: “AI resolves all service tickets.”

Clarify: which ticket classes, source evidence, permitted actions and escalation?

Require: examples of unsupported questions and a denied change

Decision: bounded assisted workflow before broader autonomy

The review converts a broad claim into testable scope and accountable decisions.

How your work is reviewed

Show the artifact, explain your decisions, test the stated assumptions and identify limitations. Module assignments build toward the course project rather than replacing it with a single example.

DELIVERY, COMPLETION AND NEXT STEPS

Know what you are signing up for.

Delivery

Hybrid learning · 1-2 day executive program + workshop

Confirm current schedule, cohort arrangements and enrollment terms with the academy.

Completion requirements

Complete the required coursework and module assignments. A course completion certificate is available after those requirements are met.

What the learning workspace includes

Follow the modules

Expand the curriculum and open the exact lesson you need.

Apply the concepts

Read explanations, inspect examples and complete module practice.

Keep your evidence

Use resources, notes, discussion and assignments to support your learning.

Learning commitments, not outcome guarantees

Completion is not a placement, employment or performance guarantee. The course project is educational evidence; any production use requires appropriate review and validation.

Start with the curriculum. Continue with the first lesson.

Review your starting point, download this guide and explore the connected course experience.
