

ENTREPRENEURSHIP · INTERMEDIATE

Entrepreneurship & Venture Builder

Learn venture building, one validated step at a time.

Learn opportunity discovery, validation, business models, MVPs, pilots and scaling through practical course assignments.

 10–16 weeks

 7 modules

 28 lessons

Concepts, worked examples, assignments and a coherent course project.

WHO IT IS FOR · WHAT YOU WILL LEARN

Your next capability.

A structured entrepreneurship course with seven modules, worked case studies and practical assignments. Study using a case study or your own business question; idea submission and venture admission are separate journeys.

Validate a customer problem with evidence

Design a viable business model and pricing

Build and test an MVP

Launch a pilot and measure traction

Prepare a credible scale plan

Audience

- Aspiring founders
- Early-stage experimenters
- Professionals transitioning into entrepreneurship
- Founder teams preparing to launch

Prerequisites

- No submitted idea is required; use a course case study or your own business question

FROM CONCEPT TO EVIDENCE

One curriculum, three connected views

This guide summarizes the same modules and lessons shown on the course overview and in the learning workspace. The next pages explain the scope and practical evidence for every module.

DETAILED MODULE CURRICULUM · 1-4

Build the foundations.

The module names, lesson sequence and evidence below match the course learning workspace.

1 Idea and Opportunity

Use a fictional crop-advisory business to learn venture design. You may also use your own case; taking the course does not submit that idea to the academy.

- 1.1 Opportunity framing
- 1.2 Problem clarity
- 1.3 Target customer
- 1.4 Mentor selection review

You will produce: Problem brief and assumption register.

2 Customer Validation

Plan discovery interviews that can disprove your hypothesis as well as support it.

- 2.1 Interview planning
- 2.2 Customer discovery
- 2.3 Validation evidence
- 2.4 Mentor validation gate

You will produce: Interview guide, evidence synthesis and validation memo.

3 Business Model

Translate a validated problem into a testable business model.

- 3.1 Value proposition
- 3.2 Revenue and pricing
- 3.3 Unit economics
- 3.4 Business model review

You will produce: Business-model canvas and assumption-based unit-economics worksheet.

4 MVP Build

Build the smallest demonstrator that tests the largest remaining uncertainty.

- 4.1 MVP scope
- 4.2 Prototype and architecture
- 4.3 Test plan
- 4.4 MVP readiness review

You will produce: Prototype, architecture sketch and test plan.

DETAILED MODULE CURRICULUM · 5-7

Apply, integrate and demonstrate.

The module names, lesson sequence and evidence below match the course learning workspace.

5 Pilot Launch

Plan a limited pilot with a clear audience, support boundary and rollback decision.

5.1 Pilot design

A pilot has a limited scope, duration, participant set and purpose.

5.2 Go-to-market experiment

A go-to-market experiment tests one channel and one message with a defined audience.

5.3 Launch checklist

A launch checklist covers access, support, privacy, incident handling, ownership and data recovery.

5.4 Launch gate

A launch gate compares evidence with pre-agreed readiness criteria.

You will produce: Pilot plan, acquisition experiment and launch-readiness review.

6 Traction and Learning

Use evidence to decide what to improve, continue or stop.

6.1 Metrics

Choose a metric that represents the behavior the venture needs, not merely activity.

6.2 Feedback loops

A feedback loop connects observation to a prioritized change and a follow-up measurement.

6.3 Experiment results

Report experiment results against the original question and acknowledge sample limitations.

6.4 Traction review

A traction review combines quantitative behavior, customer evidence and operating costs.

You will produce: Metric dictionary, feedback log and traction review.

7 Scale and Production

Prepare a responsible operating plan and present the evidence behind the venture.

7.1 Operating model

An operating model assigns decisions, delivery work, support and escalation.

7.2 Security and compliance readiness

Identify sensitive data, access boundaries and obligations that require qualified advice.

7.3 Scale plan

A scale plan connects demand assumptions with capacity, cost and quality.

7.4 Final showcase

The final showcase presents the problem, evidence, model, prototype, pilot results and remaining risks.

You will produce: Operating plan, scale scenario and final course showcase.

PROJECTS AND WORKING METHODS

Entrepreneurship learning portfolio

Develop a problem statement, gather customer evidence and plan an MVP, pilot and scale strategy through course assignments. Venture applications are evaluated separately.

Customer validation and business model

MVP and pilot evidence

Pitch narrative and course review evidence

Tools and methods

Opportunity brief

Customer interviews

Business model and unit economics

MVP scope

Launch and traction metrics

Tools are learning choices, not partner endorsements.

Inside module 1: a worked example

Case hypothesis:

Segment: growers managing small irrigated vegetable plots

Situation: deciding when to irrigate after irregular rainfall

Current workaround: personal observation and calls to peers

Unknown: frequency, cost of mistakes and willingness to change

Do not replace these unknowns with invented market evidence.

A precise hypothesis tells you whom to interview and what behavior to investigate. It is still a hypothesis until evidence is collected.

How your work is reviewed

Show the artifact, explain your decisions, test the stated assumptions and identify limitations. Module assignments build toward the course project rather than replacing it with a single example.

DELIVERY, COMPLETION AND NEXT STEPS

Know what you are signing up for.

**Delivery**

Cohort-based learning · 10-16 weeks

Confirm current schedule, cohort arrangements and enrollment terms with the academy.

**Completion requirements**

Complete the required coursework and module assignments. A course completion certificate is available after those requirements are met.

What the learning workspace includes**Follow the modules**

Expand the curriculum and open the exact lesson you need.

**Apply the concepts**

Read explanations, inspect examples and complete module practice.

**Keep your evidence**

Use resources, notes, discussion and assignments to support your learning.

Course learning is separate from venture applications

You can study all seven modules without submitting an idea. Idea submission is a separate application for venture evaluation and possible mentor-supported progression. Course completion does not imply venture admission, investor introduction or funding.

Start with the curriculum. Continue with the first lesson.

Review your starting point, download this guide and explore the connected course experience.
